CrimFig Brand Guide

Logo typography & colour specifications

1. Brand Typeface

Recommended wordmark font: Poppins

The generated CrimFig wordmark has a clean, geometric, modern sans-serif character. Poppins is a close production-ready match and is recommended for recreating the wordmark consistently across brand assets. Use **Medium (500)** or **Semibold (600)** depending on the required visual weight.

Use	Recommended font	Weight	Purpose
Primary wordmark	Poppins	500–600	CrimFig logo / brand name
Digital headings	Poppins	600–700	Website, app and marketing headings
Body text	Poppins	400	UI, website and supporting copy
Fallback	Arial / Helvetica	Regular–Bold	Systems without Poppins

2. Primary Colour Palette

The logo is built around a strong crimson identity, supported by a deep near-black/dark navy neutral. The rendered logo uses subtle tonal variation rather than a single flat red, so the following values are recommended brand specifications for consistent production use.

Colour	HEX	RGB	Recommended use
CrimFig Crimson	#D4143A	212, 20, 58	Primary brand colour, icon, accents

Deep Crimson	#A80F32	168, 15, 50	Dark crimson variation / hover states
Crimson Highlight	#E31B45	227, 27, 69	Gradient highlight / emphasis
Fig Dark	#171B2A	23, 27, 42	Fig text, headings, dark UI
White	#FFFFFF	255, 255, 255	Primary background / negative space
Soft Gray	#F5F6F8	245, 246, 248	Secondary backgrounds

3. Suggested Crimson Gradient

Primary gradient: #E31B45 → #A80F32
Use the brighter crimson toward the light source/highlight and the deeper crimson toward the opposite edge. Keep gradients subtle; the brand should still work as a flat-colour mark.

4. Logo Usage

• Prefer the crimson icon on white or very light backgrounds.
• Use the dark Fig tone for the “Fig” portion of the wordmark and supporting text.
• Maintain generous clear space around the icon and wordmark.
• For small app icons or favicons, use the standalone crimson “C”/fig symbol without the wordmark.
• Avoid shadows, outlines, bevels or additional colours unless creating a specific campaign treatment.

Important note

The logo was AI-generated, so the image itself does not contain an authoritative font or colour specification. The typography and HEX values in this guide are **recommended production values based on the visual design**, not extracted metadata from the generated image. Poppins is recommended because it closely matches the geometric character of the rendered wordmark.
